

Final Project Report — ServiceNow Standard Laptop Automation

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Student: Dharshini M

Team: SWTID-2026-8629

Date: 30 September 2026

Executive Summary

This project automates Standard Laptop procurement within ServiceNow by connecting a Service Catalog item to a Flow Designer process that creates a Catalog Task.

Implementation

The Standard Laptop item is configured under Hardware. The Standard laptop task flow uses a Service Catalog trigger and Create Catalog Task action.

Evidence

Supplied project evidence shows REQ0010002, RITM0010002 and SCTASK0010001, demonstrating the request-to-task path.

Testing

UAT covers catalog availability, Process Engine mapping, flow trigger, task action, request creation, Catalog Task generation and traceability.

Limitations

The supplied task evidence does not confirm a specific Assigned to value, and no quantitative load benchmark was captured.

Future Scope

Add assignment rules, approvals, notifications, SLAs and procurement analytics.
